

I am extremely excited to share our experience with SmartSoil Polymers Inc. Upon completion of application of product on few of our tees, we have seen a decrease in water usage by at least 40%, while maintaining the turf quality that Woodland Hills Country Club expects. This was achieved by simply applying product on our tees, a quick water in, and then watch the product work.

SmartSoil Hydrogel has the potential to be a game-changer for us by effectively controlling surface run-off irrigation and enhancing soil moisture retention. This innovative technology allows golf courses to implement sustainable water management practices, reducing water consumption and associated costs. In today's climate, where water conservation is of paramount importance, the SmartSoil Hydrogel is not just beneficial but crucial for the golf industry.

I highly recommend this product to other golf courses and to reach out to SmartSoil Polymers Inc. and experience the benefits. By using this product, you can decrease water usage in these areas, not have to apply additional products, (i.e. fertilizer and wetting agents) and see a better turf quality than you had before.
